New Securence Email Filtering Tool

2023-07-31 - Richard Woolf - [Outlook Email](#)

We have a new feature that we've added to our Office 365 implementation called Securence. It blocks emails from unknown sources and asks you to approve or deny the source. It also alerts you if emails that you've sent did not reach your intended recipient. This system works in the background and you may never receive anything. If you do, rest assured this is a legit source.

Thanks, Scott
